

To Whom this may concern,
Unless the Private Sector Companies involved in BPL, can, beyond a doubt, guarrantly that their equipment will not cause interference to ALL of the Amateur Frequencies, should not be allowed to install and operate their BPL equipment! I already have enough interference problems from power and cable lines! I do NOT need more interference! Since Bresnan/Comcast have purchased the cable system, the interference has lessened from the cable lines. EXCEL has made NO EFFORT to alleviate their interference problems! I have NO FAITH that BPL can be used without causing unbearable interference! I WILL send the FCC a bill for my Amateur equipment and Hardship if BPL does cause ANY interference to ANY Amateur frequency within my domicile, venue and license class!

Sincerely,
William G. Eads
